

AMENDMENTS TO THE ABSTRACT:

Please amend the Abstract as follows:

ABSTRACT OF THE DISCLOSURE

~~The present invention relates to m~~Methods and arrangements are provided for managing radio resources for providing wireless access to a communication system to a number of terminals. The communication system comprises a first access network ~~(120)~~ using a first access technology and at least one second access network ~~(110)~~ using at least one second access technology different ~~to~~from the first access technology. A listening agent ~~(203)~~ situated in at least the first access network ~~(120)~~ extracts access relevant information from existing messages within at least the first access network. The access relevant information is sent to an access selection manager ~~(201)~~ that compares the extracted access relevant information to access relevant information received from the at least one second access network ~~(110)~~ and determines which access network a terminal ~~(130)~~ should access based on the comparison.
